

## Multiple-meter

# MULTIPLE-METER

A multiple-meter centre consists of feed and extension sections that can be combined into the required meter assembly. The system covers the needs for large apartment buildings and terraced houses. The centre is delivered as a complete assembly. This helps you prevent extra assembly costs on site. We can also deliver field-specific centres by order. Centres more than 600 mm wide are always delivered with transit legs that facilitate transport. The dimensions do not include leg beams or connecting bars that are part of the centre.

#### Product features:

- Efficient use of space
- Output terminals as standard
- Supply from below/output upwards (can be the other way around by order)
- The centres are made of hot galvanised steel plate
- Standardised solutions reduce costs
